UPGRADE YOUR ICE MACHINE AND SAVE UP TO 25% ON WATER USAGE

BUSINESS REBATES PROGRAM

PUT A FREEZE ON EXCESS WATER USE WITH AN ENERGY STAR® COMMERCIAL ICE MACHINE

Do you currently have a water-cooled commercial ice machine in your business or facility? Did you know that water-cooled ice machines use approximately five times as much water as air-cooled ice machines to make the same quantity of ice? This water is often not recycled, so a lot of water is disposed of through an ice machine drain. Switching to an air-cooled commercial ice machine will reduce your overall operating costs, in addition to lowering your water/sewer bill. And, air-cooled ENERGY STAR certified ice machines are approximately 14 to 25 percent more water-efficient than standard air-cooled ice machines!

JEA's Business Rebates Program is pleased to now offer a rebate of \$300 for every 100 pounds of ice that your qualified new ENERGY STAR commercial ice machine produces. Rebates are capped at 50% of the total project cost and \$7,000 per project. To qualify for the rebate, you must replace an existing water-cooled ice machine with an ENERGY STAR certified air-cooled ice machine. A pre-inspection may be required to confirm eligibility of an existing water-cooled ice machine.

EXAMPLE: Purchase an ENERGY STAR ice machine, which produces 450 pounds of ice per day, for \$4,500 and receive a \$1,350 rebate. That's a 30% savings on the cost of your new, efficient ice machine, in addition to the water and energy savings you will see on your monthly utility bills!

TO APPLY

1. Ensure your new air-cooled commercial ice machine is listed on the [ENERGY STAR Ice Machine Product Finder](#).
2. Apply online at [JEA Business Rebates Application Portal](#). If possible, submit a copy of the ENERGY STAR certification. A pre-inspection may be required, so ensure that your water-cooled ice machine is not removed until JEA issues final approval. If you need to make an emergency replacement, please email JEA for a pre-approval waiver.
3. After pre-approval is granted, let JEA know your machine is fully installed and submit final invoices.
4. Upon JEA's final review and approval, you will receive your incentive check within four to six weeks.

For details on the technical requirements and application process, please download the ENERGY STAR ice machine technical sheet at jea.com/BusinessRebates.
